To whom it may concern

It is a great pleasure to write as an Assistant Professor of Computer Science at NUCES Pakistan to offer my enthusiastic recommendation for my recent student Eqan Ahmad. Under my guidance, he worked on a blockchain project and added two additional modules to his Final Year Project. It is an innovative blockchain-based degree management system that has also been selected at the National Level. These modules aimed to introduce a consensus mechanism involving validators responsible for publishing degrees, such as members from the Higher Education Commission of Pakistan and university moderators. Eqan's project exhibited creativity, technical proficiency, and a keen understanding of the practical applications of blockchain technology in the education sector. He accomplished his project in the specified time, and I'm very impressed with his work. I found him hardworking and punctual. He was, without question, one of the outstanding students in my blockchain class and attained the highest marks in all sections. He is a careful and creative thinker with an eye for detail and devotion to logic. He always followed my instructions during my supervision. I recommend him for higher education as he is a research-minded student. He must be able to get his master degree if he gets a proper platform. I'm impressed by his creative thinking and curiosity about his study.

Eqan Ahmad discussed with me his goal to get a master degree in the future, and I have enjoyed seeing such enthusiasm in one of my best students about higher studies. I believe that he will perform well in his further studies. He has excellent knowledge of blockchain, machine learning, and information security. He has really good communication and social skills.

I strongly recommend him as one of the outstanding candidates for master's studies. It will be a pleasure if I can provide further information about him.
